To Human Resource Manager

Good Day.

I would like to submit my CV as an expression of my interest to apply as Maintenance and General Process personnel in your shop. I am currently working as Supervisor in a Tenaris licensee facility in Africa.

My strong technical foundation is maintenance and repair of various machines used for OCTG products and accessories likewise considerable experience in machines from electronics manufacturing facility. My CV will discuss details of those machines I maintained & kept in good conditions.

Addition to my skills, I also supervised General Processes for the manufacturing and repairs of threads. I am not a pipe threader but I supervised all sub processes in producing threads. May I mention from pipe handling and storage, pipe sawing, cold forming and stress relief, cold root rolling, phosphate and shot peening. I also administer extra mechanical jobs for customers involving drilling, small milling, lathe turning jobs and grinding for BHA and accessories.

I would be very happy to discuss how I can be of service to your shop. I am a result oriented journey person looking for a greater career opportunity, to start and settle with my family in AU. More than my technical capabilities, a plus factor being cross-trained and familiarity with international standards and QMS concepts in doing quality jobs, safely and fast would be my notable asset to your shop. I look forward to your advise very soon.

Thank you very much for your time and attention.

Sincerely yours,

Fermin Feliciano
